Adding an album in part3

Having a photo album on my website is good for my business because it shows people what I can do. When visitors see pictures of my past work, they can trust me more. It helps them see the kind of service I offer. The website also looks better and more fun to look at when there are pictures. This can make more people want to use my service.

Adding professional look with colours

Using black and white as the main colours on a website offers many advantages for both the site and its visitors. This colour combination gives the site a neat, modern, and professional feel, helping users focus better on the content. It also improves readability because the contrast is clear and gentle on the eyes. From a technical side, black and white designs often load faster, which improves website performance. For customers, a clean and simple layout builds trust and makes the website easier to navigate. A well-balanced black and white theme works well on different screen sizes and devices, giving users a smooth experience. Overall, this colour choice helps make the website look attractive and function effectively.

Adding more pictures in part3

One of the best ways to make my website more engaging and appealing is to include more images.Images assist draw in visitors and give the website a more polished appearance.A website with more images can convey information more effectively while utilizing fewer words.For instance, when I display my photography, the images clearly demonstrate the caliber of my work.Images help people absorb concepts more quickly.Additionally, it makes them spend more time on the website.My website appears more contemporary and entertaining than one with less images.Images make a website easier to remember and assist build trust.Therefore, increasing the number of images on my website will improve its appearance and increase its traffic.

Adding JavaScript

A website benefits greatly from the use of JavaScript since it makes the site more engaging and userfriendly.Websites can do more with JavaScript than merely display text and images. By clicking buttons, completing forms, or viewing pop-up notifications, it can assist users in interacting with the page.For instance, JavaScript can verify that all fields are filled out accurately before submitting a contact form.Additionally, it enables websites to react rapidly without requiring a page reload. This improves the user experience and speeds up the website. Additionally, JavaScript may be used to create fun features like animations, drop-down menus, and picture sliders.This gives the website a more contemporary and polished appearance.
